Description

Our primary goal is to educate radiologists, medical oncologists and surgeons to improve their diagnostic acumen relating to oncologic imaging and the role of PET/CT, MDCT and MR. Gaps of knowledge may exist since the technology is relatively new. Our oncologic radiologists can provide a greater experience regarding the sensitivity, specificity and accuracy of PET/CT, MDCT and MR. We will also make attendees aware of and knowledgeable about potential diagnostic pitfalls and how to avoid them.

Audience

This course should be of value to Radiologists, Medical Oncologists and Surgeons.

Objectives

Upon completion of this conference, participants will be able to:

- Implement new techniques into clinical protocols to improve the quality of imaging results and enhance overall patient care (knowledge, competence, performance, patient outcomes)
- Provide and review data on the impact of newer imaging technologies that will improve confidence in diagnosing imaging findings, thus improving diagnosis and avoiding pitfalls (knowledge, competence, performance, patient outcomes)
- Identify clinical needs for imaging studies and determine which imaging studies provide the best chance for most accurate diagnosis and the important imaging features for accurate cancer staging (knowledge, competence, performance, patient outcomes)
