

# Inpatient COVID-19 Update

Project ECHO at MAHEC

[Rebecca.Bernstein@mahec.net](mailto:Rebecca.Bernstein@mahec.net)

## **Future Sessions on COVID-19**

### **Wednesdays - 12 noon**

August 12 – Dr. Ahmed Sesay, Pulmonary

August 26 – Dr. Alisa Alker, Infectious Disease

September 9 – Racial/Ethnic Disparities

September 23 – Diabetes/Chronic Disease

October 7 – TBA

October 21 – TBA

# COVID-19 Western North Carolina Dashboard (18 Counties)

Last Update (updated weekly): 7/21/2020

## County Map by Case

Cases Per 10,000

03/14

07/28

Click to highlight map, unclick to revert map

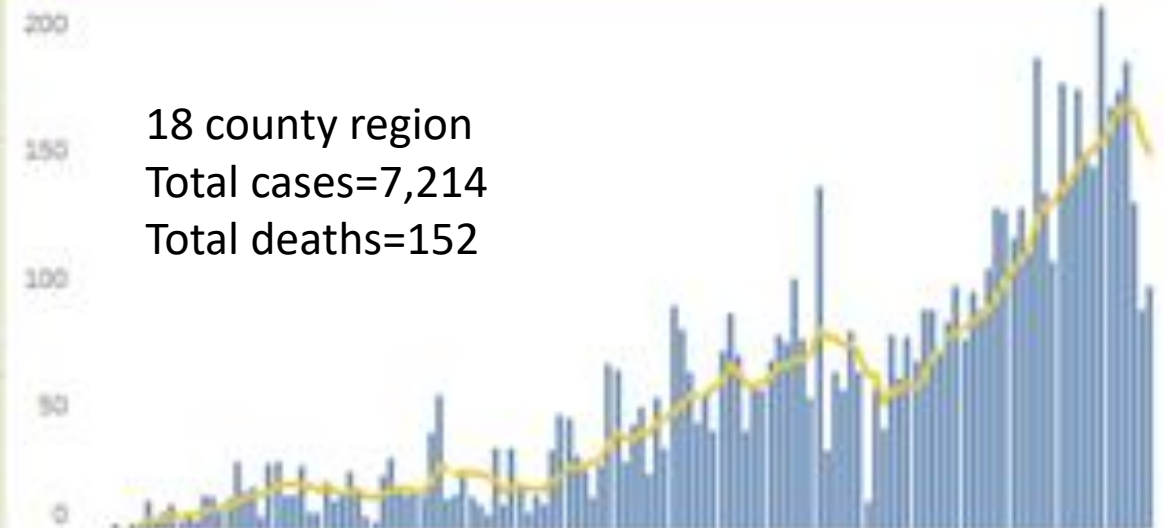

## Lab-Confirmed Cases

Graphs show data for counties selected in map.

- Cases by date reported
- Cases by date of specimen collection

## Cases by date reported

WNC Healthy Impact

Heat map in above is for cases per 10k population

Graph on right shows cases per day (based on report date), the yellow line is a 7 day moving average

# Western North Carolina Demographics

Select County:

Select Demographic Metric:

Data can be filtered by county and demographic data. All data will reflect data for that group. Numbers may not equal 100% due to rounding. All data are primary and subject to change.

## By Race

## By Age

## By Ethnicity

## By Gender

## Missing Demographic Data

Cases by race	29.2%	2,038
Cases by Age	0.0%	1
Cases by ethnicity	32.8%	2,368
Cases by gender	1.4%	101

# Severity of disease

- Cohort in China: 44,000 patients
  - 81% had mild to moderate disease
  - **14% had severe disease** which was dyspnea, hypoxia, or 50% lung involvement on imaging
  - 5% were critical – resp failure, shock, Multiorgan system dysfunction

# Onset of Symptoms

- Symptom onset: 2-11 days since exposure
- Starts with fever and cough
- Dyspnea: 5-8 days
- ARDs: 8-12 days
  
- Length of hospitalization: 10-13 days
  
- 26-32% of all hospitalized patient were admitted to ICU

# ARDS: Acute Respiratory Distress Syndrome

- All patients: 3-17%
- Hospitalized patients: 20-42%
- ICU patients: 67-85%
  
- ICU mortality ranges: 39-72%

# Case Study

- 40M with DM2, not on insulin p/w SOB, fever, cough, body aches, mild diarrhea x1 week
- Exposed to known COVID+ 1 week prior
- ED vitals: T 103.0, HR 130-140s, Normotensive, O2 sat – 83% on room air, RR 40-50bpm!
- EXAM: Lungs clear!
- Na 133, glucose 423, A1c 8.2%
- ABG:
  - 7.48, PCO2: 26, **PO2: 63** on 4L NC and 36% O2.
  - PF ratio was 175, A-a gradient 161

Study Date: 7/17/2020  
Study Time: 17:19:38  
Patient ID: 2065  
Series: 1

A

# Questions

- How do I stabilize?
- How do I prevent deterioration?
- How do monitor to see that he is getting better?

# Admission

- COVID-19 suspected/confirmed and inability to tolerate orals, hypoxia
- Place on isolation
- Initial workup:
  - CBC, CMP, PT/PTT, Troponin, BNP
  - LDH, CRP, Ferritin, CPK
  - Ddimer, ?APL
  - Type and Cross in case they need Convalescent Plasma
  - ABG if hypoxic
  - UA/Urine Culture, blood culture x2, sputum culture

# Case Study Labs

	Admission	Day 6	Day 9
<b>LDH (IU/L)</b>	760	526	276
<b>CRP (mg/dL)</b>	19.31	4.40	0.61
<b>Ferritin (ng/mL)</b>	3279	1147	<b>1232</b>
<b>D-Dimer (mcgFEU/mL)</b>	2.06	0.88	0.53
<b>Lymphocyte, absolute</b>	1.0	0.5	
<b>Lactic Acid (mmol/L)</b>	2.61	1.86	

# Respiratory

- Nasal cannula → HFNC (Optiflo, Vapotherm)
  - Target SpO<sub>2</sub> 92-96%
  - Avoid NPPV unless other indication
- Incentive spirometry
- ROX Index for intubation after HFNC =  $\frac{\text{SpO}_2/\text{FiO}_2\%}{\text{Resp rate}}$
- Proning

# Proning

**Supine**

**Prone**

# Other Tenants of Therapy

- IVF: Keep dry vs. buffered/balanced crystalloids
- Anti-pyretic: Avoid NSAIDs to avoid renal damage
- Antibiotics?
- VTE prophylaxis
- Steroids
- Antivirals
- Convalescent Plasma

# Antibiotics?

## Acute Bacterial Co-Infection in COVID-19

### A Rapid Living Review and Meta-analysis

**28** Studies  
included

**3448** COVID-19  
Patients

December 2019  
to March 2020

**3.5%**  
**Co-Infection**

On presentation

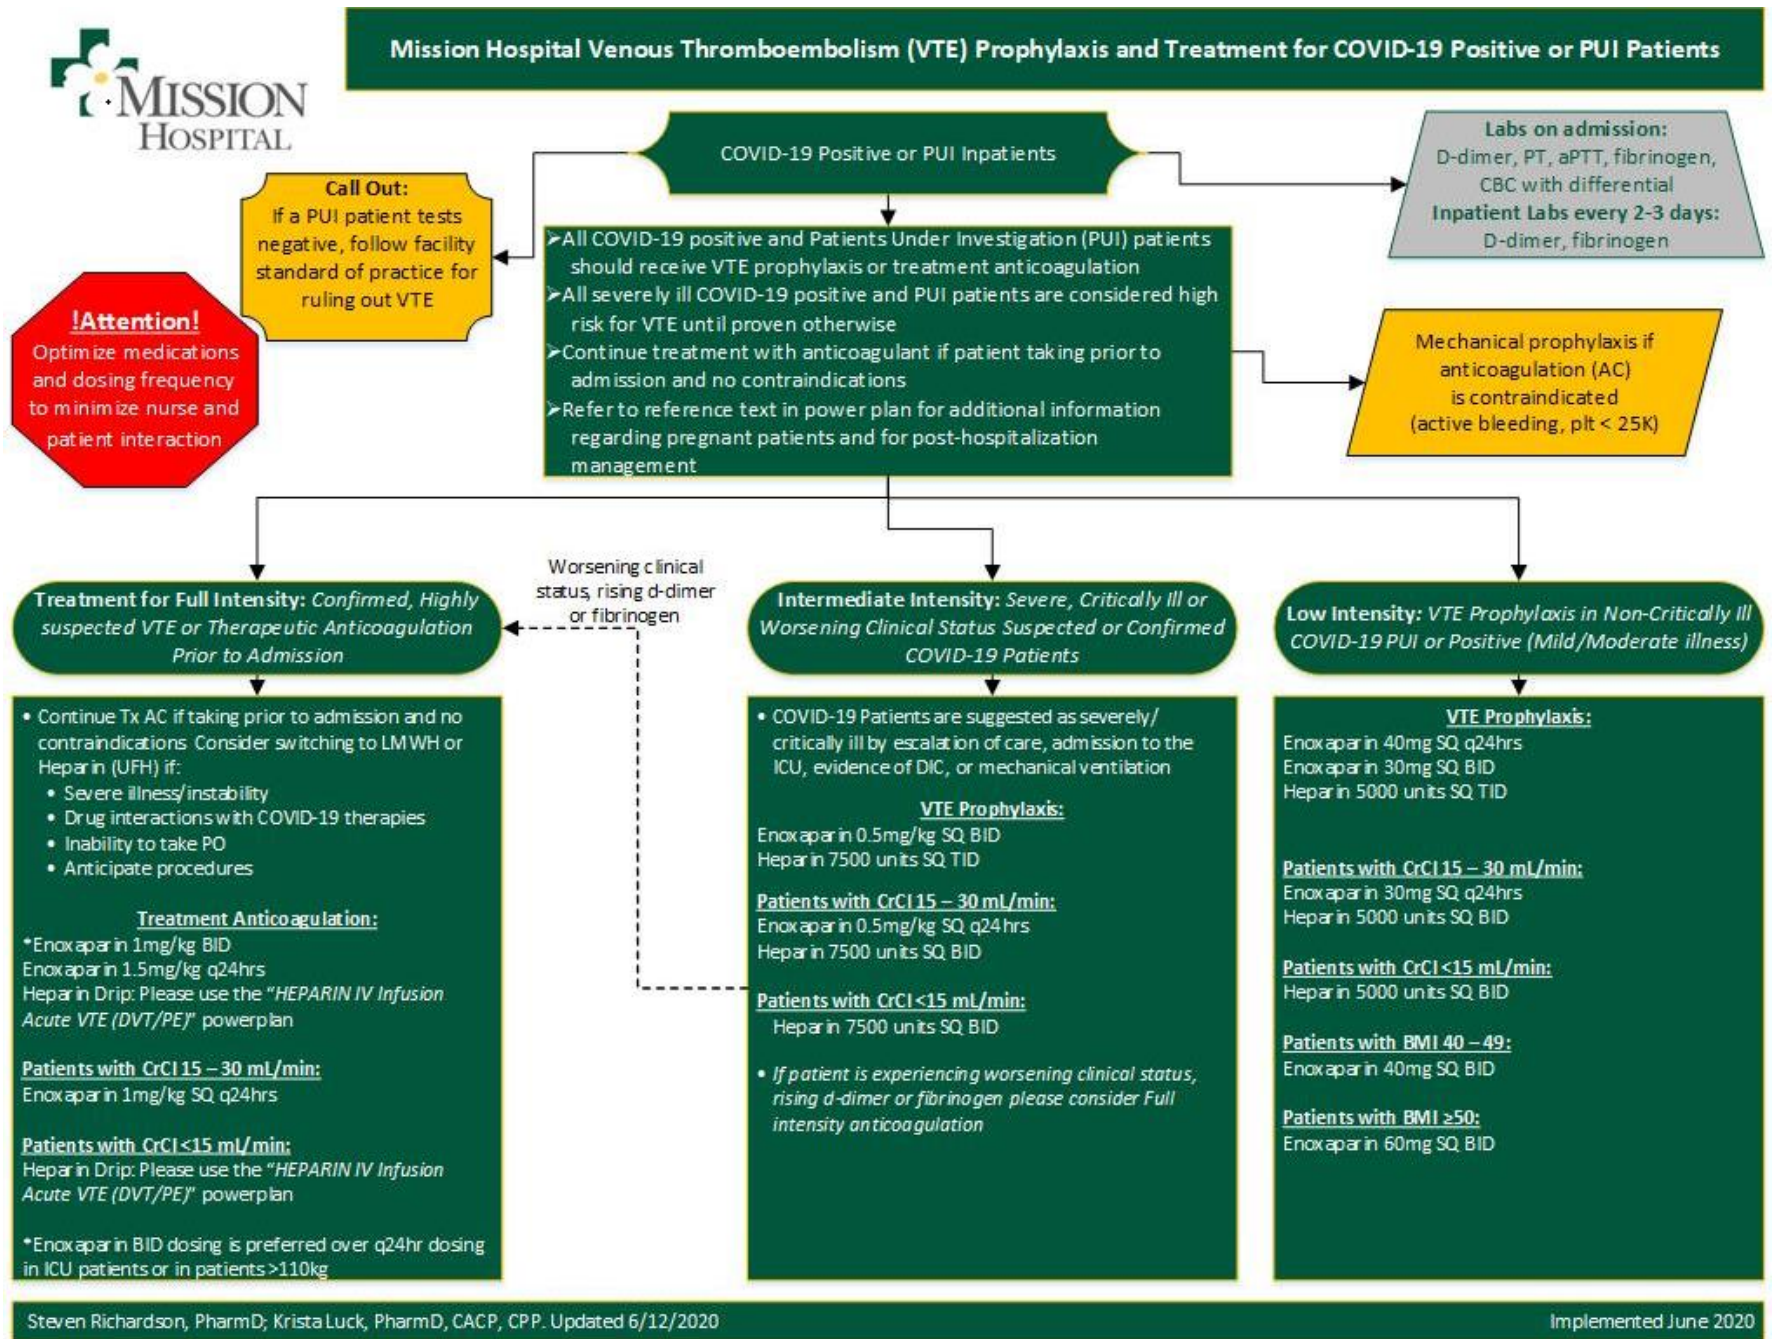

**15.5%**  
**Secondary  
Infection**

After presentation

**71.3%** Antibiotic  
Prescribing

# VTE Prophylaxis

# Steroids

- RECOVERY Trial: **Significant reduction in the incidence of death** for those on supplemental O2 or mechanical ventilation at the time of randomization. It seems to have a more robust effect in the Mech Ventilation arm.

# Steroids

- Montefiore Medical Center
  - Early use of Glucocorticoids was not associated with mortality or MV
  - CRP >20mg/dL: (odds ratio, 0.23; 95% CI, 0.08-0.70)
  - CRP <10mg/dL: (OR, 2.64; 95% CI, 1.39-5.03)

*J. Hosp. Med.* 2020 August;15(8):489-493

# Remdesivir

- NIH: “remdesivir be prioritized for use in hospitalized patients with **COVID-19** who require supplemental oxygen but who are not on high-flow oxygen, noninvasive ventilation, mechanical ventilation, or ECM...**uncertainty regarding whether starting remdesivir confers clinical benefit in these groups**”
- IDSA: “Remdesivir appears to demonstrate the **most benefit** in those with **severe COVID-19 on supplemental oxygen rather than** in patients on mechanical ventilation or extracorporeal mechanical oxygenation (ECMO).”

# Convalescent Plasma

## Inclusion Criteria

- Age at least 18 years
- Laboratory confirmed diagnosis of infection with SARS-CoV-2
- Admitted to an acute care facility for the treatment of COVID-19 complications
- Severe or life threatening COVID-19, or judged by the treating provider to be at high risk of progression to severe or life-threatening disease
- Informed consent provided by the patient or healthcare proxy

Severe COVID-19 is defined by one or more of the following:

- Dyspnea
- Respiratory frequency  $\geq 30/\text{min}$
- Blood oxygen saturation  $\leq 93\%$
- PaO<sub>2</sub> : FiO<sub>2</sub> ratio  $< 300$
- Lung infiltrates increased 50% within 24 to 48 hours

Life-threatening COVID-19 is defined as one or more of the following:

- Respiratory failure (requiring mechanical ventilation)
- Septic shock
- Multiple organ dysfunction or failure

## **Future Sessions on COVID-19**

**QOD Wednesdays at 12 noon**

August 12 – Dr. Ahmed Sesay, Pulmonary

August 26 – Dr. Alisa Alker, Infectious Disease

September 9 – Racial/Ethnic Disparities

September 23 – Diabetes/Chronic Disease

October 7 – TBA

October 21 – TBA
