Supplementary Resources:	Required Resources		
	Video: <u>Stopping the Spread of COVID-19</u>		
	Supplementary Resources:		
<u>CDC: Infection Prevention and Control Assessment Tool for Nursing Homes Preparing for COVID-19</u>			

- <u>CMS: QAPI at a Glance</u>
- <u>CMS: QAPI Self-Assessment Tool</u>

Quality Improvement: What is QAPI and how can it support this work

Learning Objectives:

- Identify connection between your COVID-19 improvement work and your QAPI processes
- Describe the key elements of an effective improvement team

Required Resources:

Video: Introduction to QAPI in Nursing Homes

Activity:

• Review your internal QAPI plan and note any alignment and adjustment needed to support this work

Discussion

Guided Questions

- Is there a clear outline for screening procedures that is known by all relevant staff?
- Do staff know who to contact when someone fails the screening?
- Based on your experience and what you've seen today, what's missing?
- How do the aims of this program align with your current QAPI plan?

Sample Case & Case Questions

Many states have restricted nursing home visitation by family members/care partners for several months. Visits have been limited to outdoor areas, with a series of screening questions, temperature checks, social distancing (6 feet or more), masks for all visitors, hand hygiene. Now some states are relaxing those guidelines and permitting indoor visitation with certain protocols. Staff, owners and local municipal leaders have raised concerns about indoor visits possibly raising the risk of infection – for both residents and staff.

- How would you approach writing guidelines or protocols for indoor visitation if you were a Director of Nursing or Administrator?
- How would you reassure staff, families, and residents that the indoor visits will be made as safe as possible?
- How will you address vendors or other workers who need to enter the building?
